

More enjoyment, more comfort, more time ...with the top down

Custom Fit Convertible **Wind Deflector**

Our wind deflector reduces wind backdraft up to 75%, nearly eliminating wind buffeting and turbulence in the interior of your convertible.

1. Extend your Top-Down Driving Season

You can start driving earlier in the spring, drive later into the fall and keep your convertible nice and cool even on the hottest days.

The wind deflector features a strong mesh fabric screen that leaves rear-view mirror visibility unaffected.

The wind noise is significantly lower, allowing you a more enjoyable drive. Listen to music or talk to friends, even at highway speeds.

2. Reduce Wind Buffeting Up To 75%

With a Love The Drive wind deflector it will keep the wind down and you & your passengers looking great.

3. Quick, Easy and Painless to Install

The wind deflector arrives fully assembled and can be installed in minutes. No permanent modifications.

VW CABRIOLET

How will the Love The Drive™ wind deflector increase my driving fun? Love The Drive™ wind deflector changes the airflow through the car so that wind is diverted over the back of the car, instead of swirling inside the interior.

Customer Testimonials

Then we took our mustang out on the highway to see the changes the wind deflector made!!!!!! Great result.

It is everything you said it would be. I want to thank you for including the fabric storage container-solves another problem. Now,,,,,, can you do anything about the bugs that are smashed on my windshield? Just kidding!

Regards, Lenora

The wind deflector went on quick and easy - just like the video on your website. And it works great! My wife will now ride with me without making special arrangements for her hair or making me put the top up. Count me as another very satisfied customer!

Thanks again and with your help I'm really do "love the ride!"

Jim

..... driven with the roof down almost the whole time since August til now (winter). With a bit of heat on I have routinely driven on the highway for hours with temperatures at -2C, the whole time comfortable and enjoying the cool air gently mixing with the warmth.

In rain, with the exception of a downpour, as long as you are moving over 60km/hour you can drive with the roof down and actually be dry as the wind passes over the car with the blocker in place. I may look odd, but why put the roof up when you are dry and warm.

Your wind deflector is a great product. The instructions when I got it were clear and simple. Installation and removal has never been more than 45 seconds. I clocked it as less than 30 seconds from removal from the very nice bag it has to full installation.

**cheers.
John.**

Drove home (350 miles and 6 hours) after installing it on the E30. WHAT A DIFFERENCE!!! My wife loved it as she didn't have to wear a scarf. It poured rain for about 30 miles - not a drop in the cabin of the car. We could listen to music and talk while seeing all the scenery.

An added benefit is that we "Love the drive" so much getting there was not an issue... we took our time and enjoyed it while everyone else on a busy long weekend was locked up tight in their cubical cars seeing nothing but anxiety over getting there as quick as they could. So an added public benefit is one more safer driver on the road.

**Thanks
Mark and Liane Ranger**

Don't know how we lived without it! Best thing that we bought for our 2006 Mustang GT! Works unbelievably well and looks great! We leave it up and it cuts headlight glare. Great people to deal with!
